COOL REFLECT™ YARN

**Request a Sample and
Compare the Difference First Hand!**

When the Heat is On, Cool Reflect is in Full Effect

Conventional synthetic turf options can reach temperatures up to 160°F and higher on an average sunny day. The heat generated by the activity on the turf combined with the climate, equates to a very uncomfortable and potentially dangerous surface, which can be a costly liability.

Thermal comfort is critical to you, your children, your players, and even your pets wellbeing. With our Cool Reflect synthetic grass systems, you can expect much lower temperatures on the field, playground, or in the backyard. The results are a safer environment, more time for play, and less likelihood of injury and burns.

Our tested Cool Reflect yarn has an SRI Value of 33 and reduces heat emittance up to 30 degrees.

- ✓ **Contributes to the diminshment of the Heat Island Effect**
- ✓ **Lead Free and Non-Toxic**
- ✓ **End of Life recycling solutions**

We offer a broad selection of products for many applications including sport, recreation, landscape, pet, and more...
